Toilet Repair, Plumbing & Valves**

Fluidmaster, Inc. was born in 1957 when founder/inventor Adolf Schoepe decided to bring a better idea to life, a better product to the marketplace.

Long convinced that the existing toilet technology was inefficient and unreliable, Schoepe devised a far more effective fill valve that could readily replace other, less capable mechanisms. It was designed with far fewer moving parts and constructed from premium materials that would outlast corrosion-prone metals.

Most important, it was designed to work with, rather than fight against, water pressure.

Plumbers and do-it-yourselfers soon realized the Fluidmaster valve outperformed any other. It operated smoothly, quickly, quietly. And it stood up to years of flushes, even in hard water.

Why do Fluidmaster parts last so long? Superior engineering and top-grade materials. We keep that spirit of invention alive by always looking (and finding) new ways to make our repair parts work better and last longer.

The popularity of Fluidmaster valves has created a perfect springboard for Fluidmaster's expansion into related product lines. Today there is a Fluidmaster part for nearly every toilet tank problem. Even toilet manufacturers like Kohler, Eljer and Briggs presently rely on Fluidmaster to add value to their own products.

Now, 43 years after surprising the industry with its trailblazing product, Fluidmaster sells more toilet tank replacement valves than any other manufacturer in the world.
